

THROTTLE BODY AND AIR INTAKE CLEANER

with Spray Any-Way Valve

THE PROBLEM

The recycling of exhaust gases and crankcase vapors leads to the accumulation of deposits in the throttle body and air intake system, which can reduce engine performance. These deposits obstruct airflow and hinder the smooth operation of the throttle plate, resulting in rough idling, hesitation, and other performance issues.

THE SOLUTION

Enviroway Throttle Body and Air Intake Cleaner is a highly effective aerosol cleaner designed to remove deposits from the throttle body and prevent the throttle plate from sticking. It quickly restores the normal operation of the air intake system associated with a dirty throttle body, minimizing drivability issues and enhancing both power and performance.

THE BENEFITS

- Removes harmful deposits.
- Eliminates hesitation and rough idle.
- Improves engine performance.
- Sensors and catalytic converter safe.
- Cleans and frees air-intake parts.

DIRECTIONS

THROTTLE BODY & AIR-INTAKE: With engine off, remove air-intake boot and spray generously onto open butterfly/throttle valve and throat areas. **LINKAGE:** Spray all pivots and connections to remove any buildup that may cause sluggish operation. **PCV VALVE:** Remove valve and insert extension tube into open ends while working the valve back and forth. Clean hose with air pressure and replace the assembly.

For best results, use once yearly or every 15,000 miles (24,000 km), whichever comes first.
